Fig. 1. Mapping QTLs determining resistance to races of *Xanthomonas campestris* pv. *campestris* (PWI231, race 1; 5212-1, race 3; HR11279a, race 4; B-32, race 6) in doubled haploid lines of *Brassica rapa* L. mapping populations DH30 and DH38. Figures 1 and 2 after a race designation indicate that the locus was mapped in the 1st or in the 2nd year of testing; A01-A10 — linkage groups (3 greenhouse, artificial infection).
